

TEST 3

Polygon Drawing

This is your third and final test. In this test, you will use the polygon tool to draw shapes, which is commonly used in image segmentation for artificial intelligence.

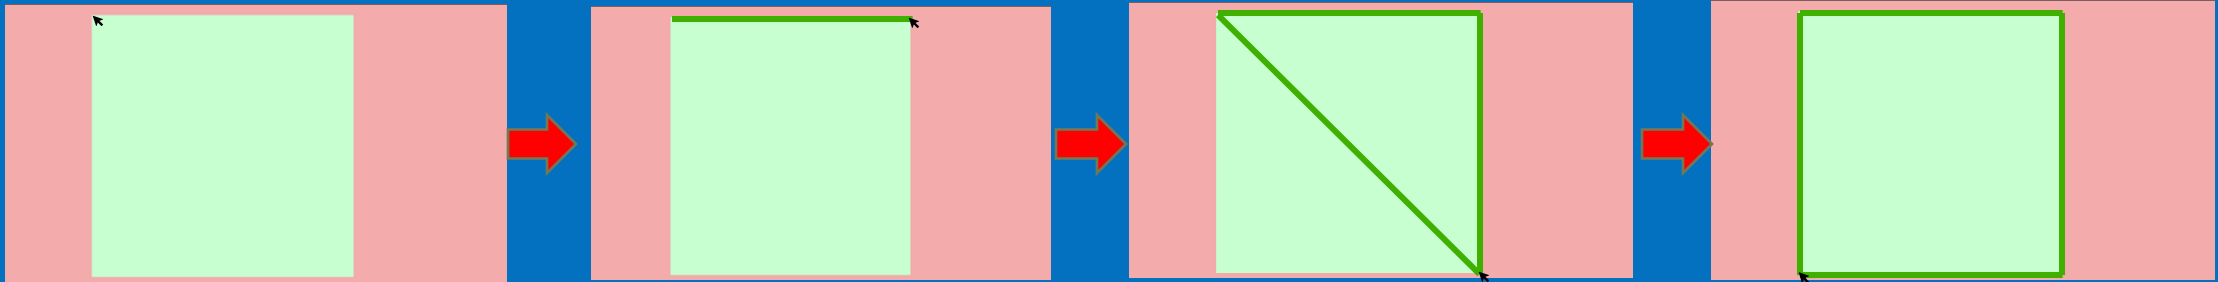

INSTRUCTIONS

1. Identify the shape
2. Click to Create Points.
3. Choose the category.
4. Fill the Shape.
5. Repeat for each shape
6. Submit and move on
7. Delete a point.
8. Remove a shape.
9. IMPORTANT NOTE!

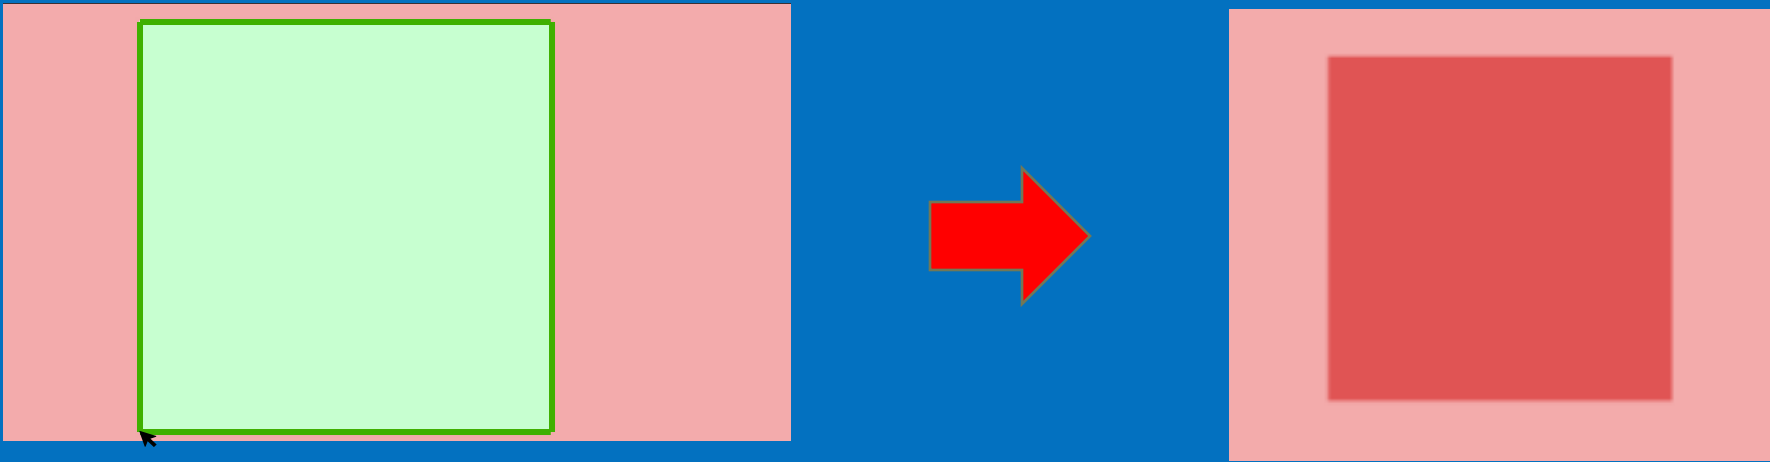

Click to Create Points:

1. Use the polygon tool to draw shapes by clicking on the edges of the shape. For example, a square has four edges, so you will click on the four corners of the square to create the shape.

Fill the Shape:

1. Once you have clicked on all the edges of the shape, press the "Enter" key on your keyboard to fill the shape with the color red.

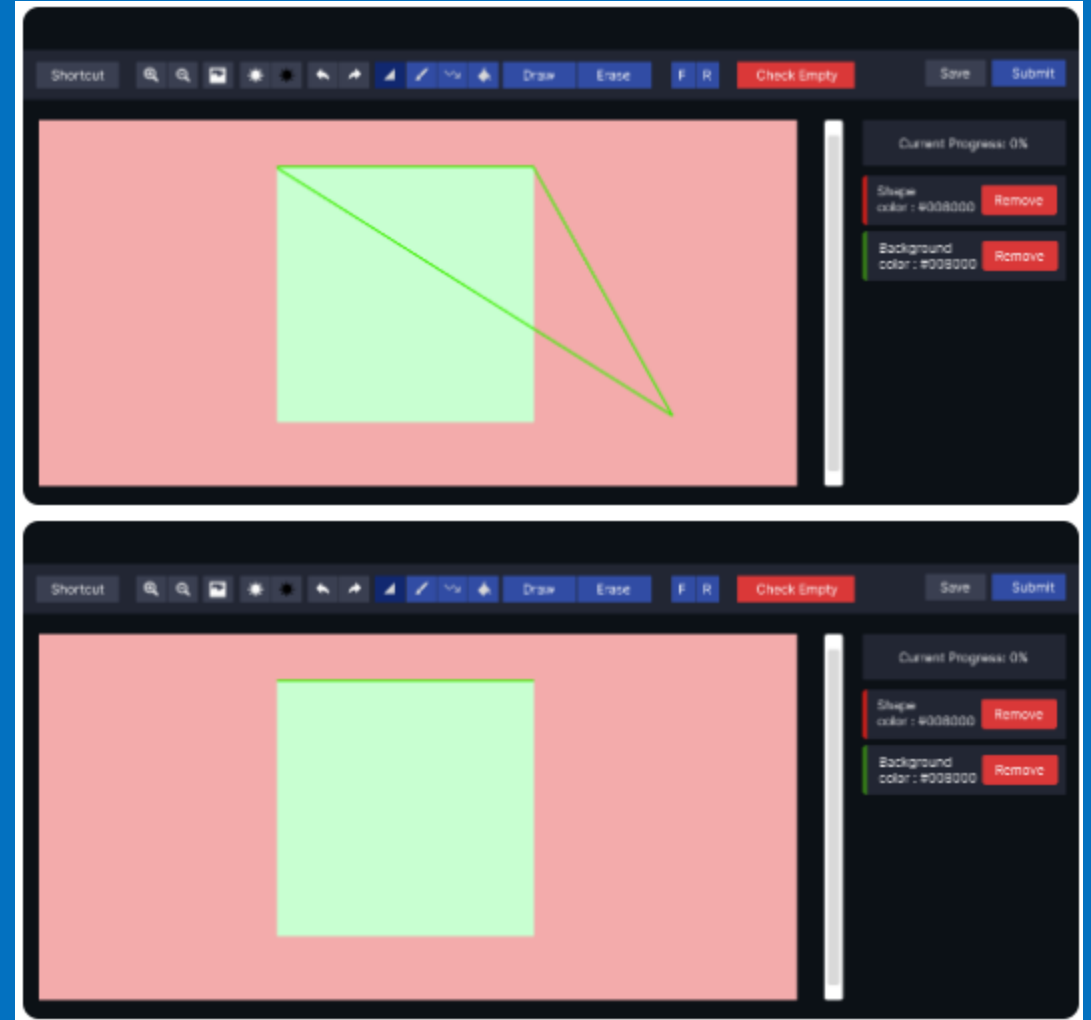

Submit and move on to the next shape

1.Repeat this process for the next shapes.

Move to the next page to continue...

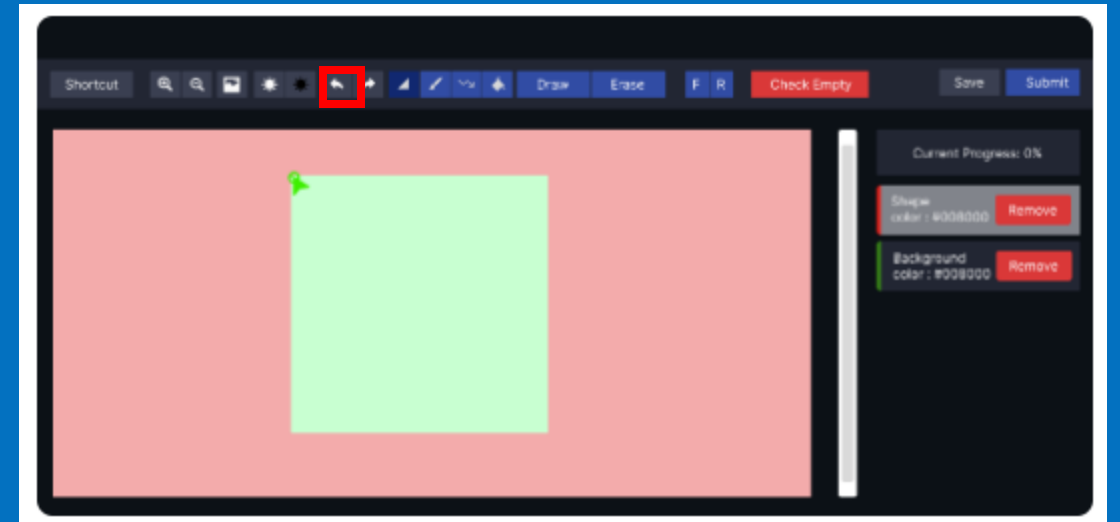

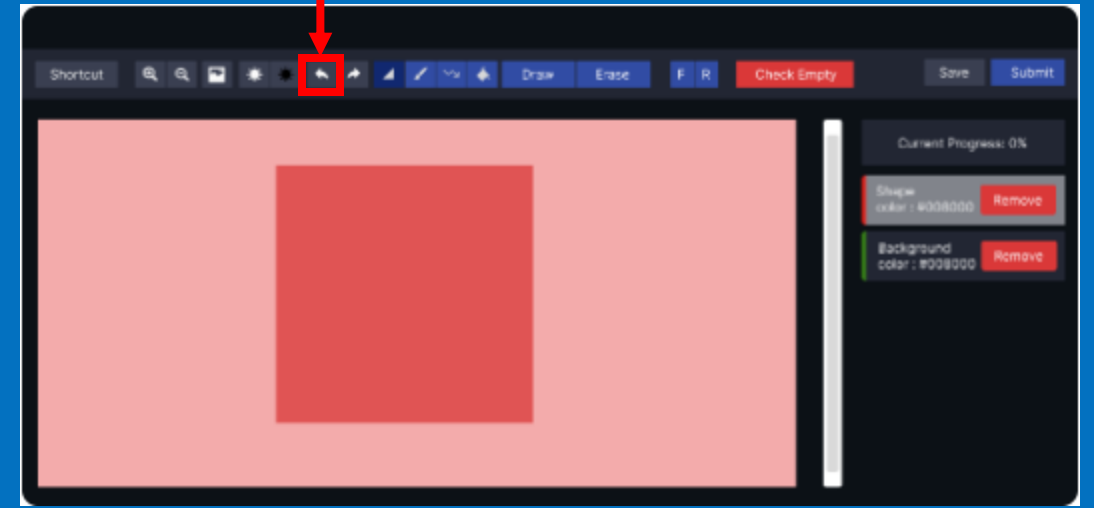

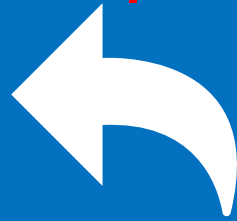

Delete a Point:

1.If you make a mistake or your line is crooked, use the "Backspace" key on your keyboard to delete a point. This will take you to the previous point, helping you correct your line.

Remove a shape

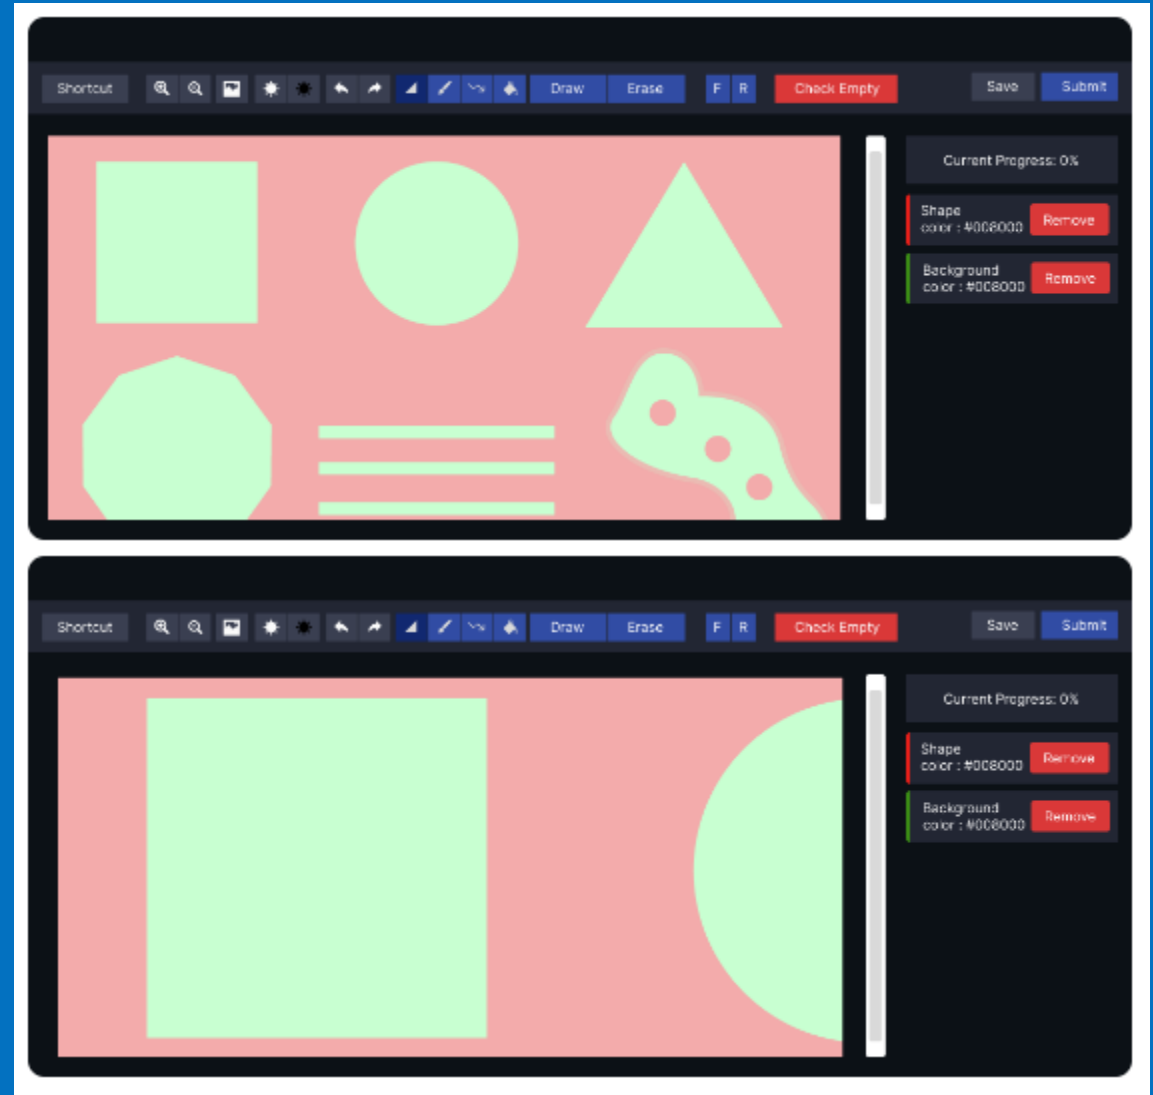

1.If you make a mistake with the shape use the “undo” button at the top to remove the most recent shape. This will delete the shape you just drew.

Precise Labelling

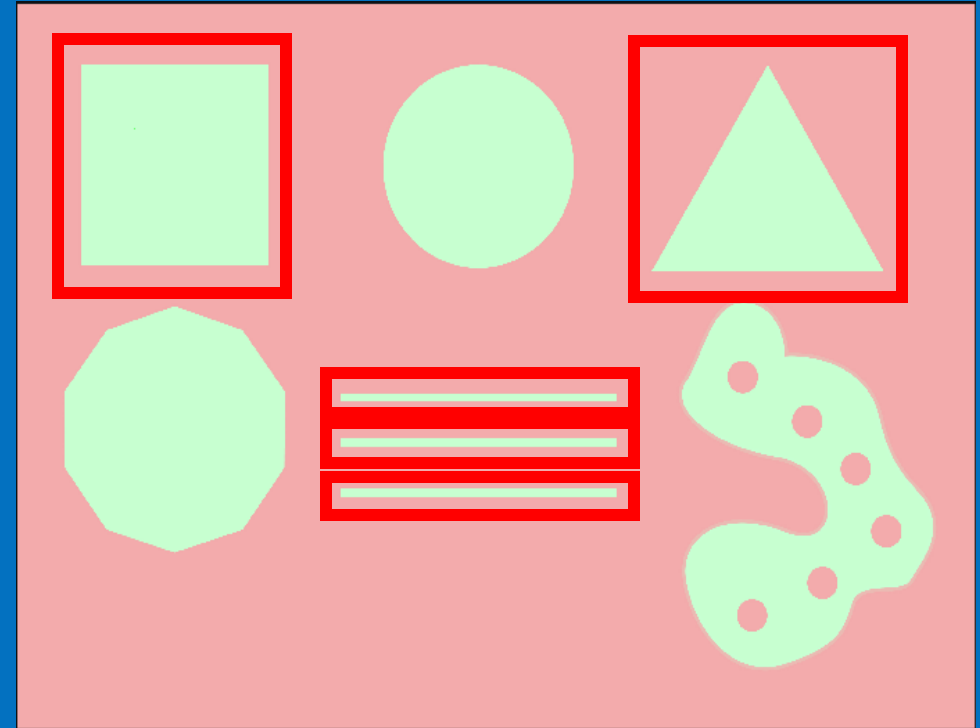

1.To adjust the image size for better precision, use the zoom in and out buttons in the tool menu.

Alternatively, you can use the keyboard shortcuts "+" and "-" after "0" to zoom in or out.

Important Note:

1. You are required to label only the **square**, the **triangle**, and the **three rectangular shapes** in this test.
2. Once you have completed the test, inform the instructor before you leave.
3. We wish you the best of luck in completing the test! If you have any questions, feel free to ask the instructor.
